

St. Louis, Mo is a large commuting city. The number of interstates that run through and around the city combined with the number of people using these roads, in evidently leads numerous traffic problems. The up-to-date local weather and traffic channels provided by XM Radio are a great bonus to any XM costumer. Not only are we given the information we have the opportunity to hear this information at the times we need it, without waiting through commercials or for the timing of the individuals radio stations. As a paying customer it is our right to have access to this information, and it should not be up to the National Association of Broadcasters to dictate what we are allowed to hear. For the reason stated above, I respectfully urge the FCC to reject the NAB's petition 04-160.

Thank you,
Tiffany Suda
